**DETAILED ACTION**

**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Maria Eliseeva, Reg. No. 43,328 on 10/22/08.

The application has been amended as follows:

In claim 1, after line 2 insert:

-a computer comprising:-

In claim 1, last line:

replace "subject" to -subjects-

***Response to Amendment***

1. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

***Response to Arguments***

2. Applicant's arguments filed 7/21/08 have been fully considered but they are not persuasive.

Applicants state that Garakani does not teach defining virtual reference subjects in order to define regions. The examiner respectfully disagrees since Garakani teaches

an automated defining virtual reference subjects in order to define regions as applicants have already admitted on page 7 of the after final amendment of 3/6/08.

Applicants state that Garakani has nothing to do with a user defining locations within images. The examiner respectfully disagrees since Garakani teaches an automated defining of locations that can manually be done in order to arrive to automation of defining locations.

Applicants state that the attention window size has no relation to the defined reference subjects. The examiner respectfully disagrees since the attention window size is operator selected to allow said automated defining the locations or the claimed reference subjects to occur within said attention window size where the automated defining can be manually done just as the attention window size.

3. Applicant's arguments, see Appeal, page 7, lines 14-16 filed 7/21/08, with respect to 102(e) have been fully considered and are persuasive. The rejection of claims 1-10 has been withdrawn.

***Allowable Subject Matter***

4. Claims 1-10 are allowed.

5. The following is an examiner's statement of reasons for allowance:

Claim 1 is allowable, because as the applicants have properly pointed out on page 7 of the appeal brief that " 'applying the identified optical flux to the defined reference subjects' are absent in the Garakani publication."

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Donat-P. Hader (Image Analysis Methods and Applications) is pertinent as teaching identifying optical flux on page 409, but is silent with applying the determined optical flux to a position. Hader uses the optical flux to detect motion for tracking, not to apply the determined flux to a determined position for tracking.

Bernd Jahne (Spatio-Temporal Image Processing) is pertinent as teaching a method of optical flow in the context of optical flux on page 86; however, Jahne does not state if optical flux or flow are the same. Even if assuming that optical flow and optical flux are the same, Jahne does not clearly apply the optical flux or flow to a user specified position.

Chaplen et al. (US Patent 6,913,877) is pertinent as detecting optical changes in the form of optical flux that is represented as RGB as discussed in col. 2, lines 46-56, but Chaplan is deficient for the same reasons as Hader.
